1 Project outline

You have already worked with virtualization and virtual machines.

Outline of the 5 weeks

- Week 34: Start project, form groups, get access, built an overview, decide on a HLD.
- Week 35: Initial setup
- Week 36: Subproject 1
- Week 37: Subproject 2
- Week 38: Subproject 3

2 Mandatory elements

- All weeks will include presentations on class.

This is a presentation with the class as *audience* and you must have decided in advance the *purpose* of the presentation

- Project management

You will create a gitlab project for project management and for configurations.

Remember to invite the teachers.

- All weeks will include a meeting with the teacher(s)

This is a 10-15 minute meeting, where you present status on tasks and milestones, and if you have specific questions

3 End-of-SS report

Each SS ends with a report hand-in. The report must document, that the student is able to:

- Document a project or process
- Learn new skills and/or gain new knowledge
- Explain technical or other relevant material within a given context
- Present technical or other relevant material within a given context
- Do structured project management

The report will includes links and references to relevant material, either online links or appendices. The former is preferred.

Since Gitlab is used for SS, links to gitlab resources like design documents, tests and more may be relevant.
